At Harmoniz we aim to develop tomatoes, peppers and cucumbers that consumers choose first and choose again.

We value the natural power that emanates from the meeting of minds and the meeting of nature. We are proud to offer agility in breeding, a reflection of both taking the road less travelled and a commitment to flavour by design. We have spent years developing advanced technology tools to grow our garden “full seed ahead” together with specialist breeding capabilities to maximize flavour, enhance eating experience, yield consistency and sustainability.

We create delicious and memorable vegetables that consumers love, available year-round and create value for growers and retailers, in a sustainable way.

We drive market demand by combining the expertise of an exceptional seed company with the insights of a food company with a culture of agility, creativity, quality and excellence in everything we do.

We foster a partnership approach along the value chain to deliver profitable growth for all.

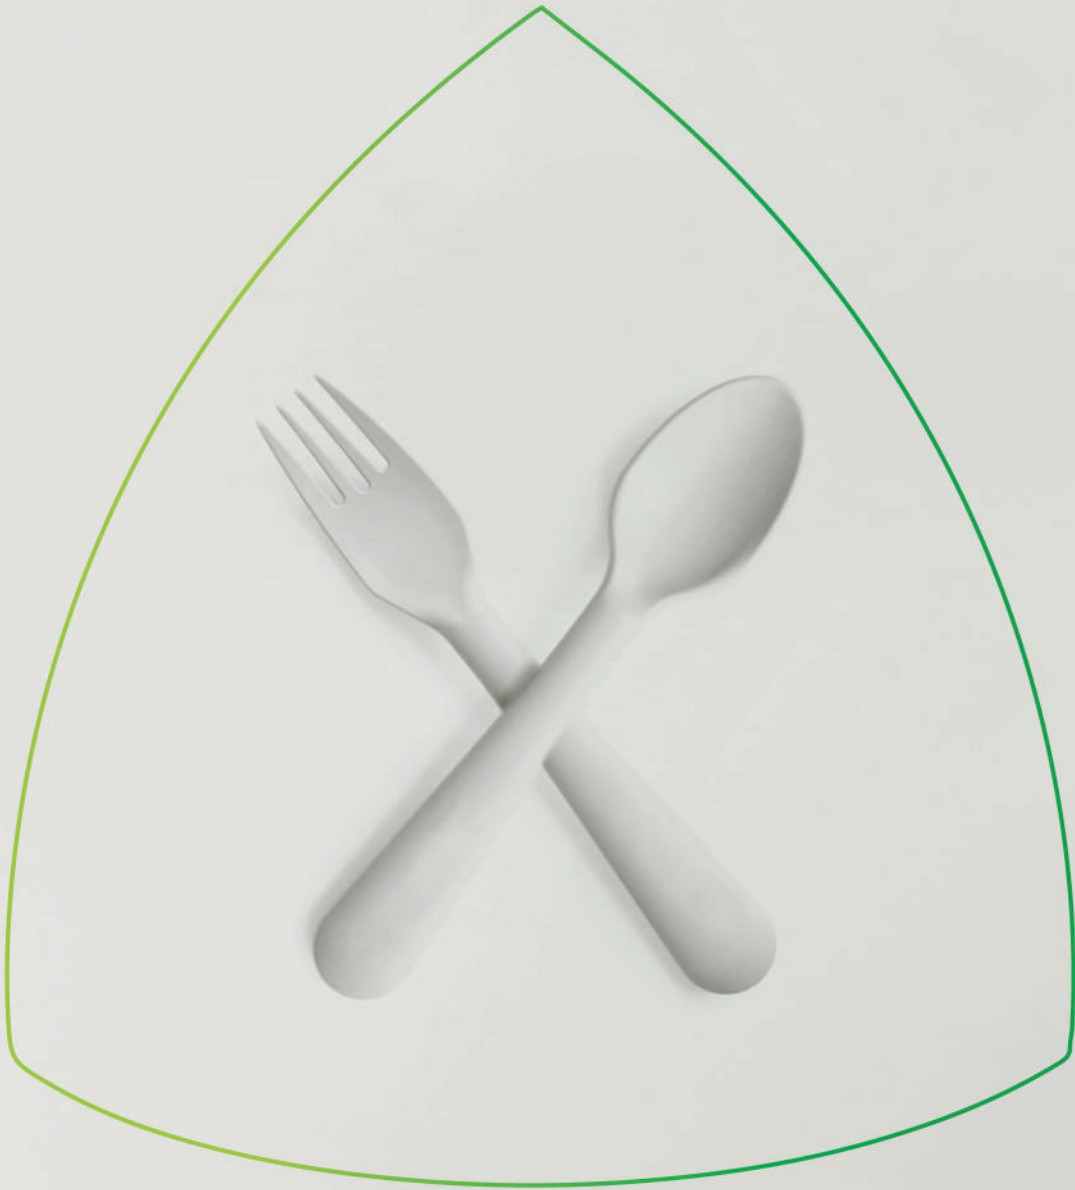

Together with our partners we fully evaluate all our varieties so that when we offer them to you, we do so with absolute confidence. It is a right — not a privilege to fall in love with the products you bring into your life.

Our commitment is to honour that in all we create throughout the value chain.

Fusarium Oxysporum f.sp. Radicis-Lycopersici	HR	For
Leveillula Taurica	IR	Lt
Stemphylium Lycopersici	IR	Sl
Verticillium	HR	Vd
Nematodes	IR	Mj

★ IR = Intermediate Resistance to ToBRFV / HR = Highly resistant to ToBRFV

Varieties that show significant reduction in symptoms. Tested for two consecutive seasons under virus pressure in comparison with susceptible varieties.

(JSF HR definition)
High Resistance (HR) / the ability of a plant variety to restrict the growth and/or development of the specified pest, and/or the symptoms and/or damage it causes, to a high degree. HR varieties may still exhibit minor symptoms or damage under heavy pest pressure and should not be confused with immune plants that are defined as unable to support any pest growth and development.
Intermediate Resistance (IR) / plant varieties that restrict the growth and/or development of the specified pest and/or the damage it causes but may exhibit a greater range of symptoms or damage compared to high resistant varieties. Intermediate resistant plant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest pressure.
